

Dante Config Editor V3.05 Beta

Quick start - offline editing of Dante XML files

Beta version. Work on a copy and always validate the final XML by importing it into the appropriate official Dante tool before real use.

Recommended workflow

- 1** Open XML
Choose a Dante export. The application works offline and does not access the Dante network.
- 2** Review alerts
Click Show devices to display and filter the affected devices.
- 3** Edit
Use Device details, the Patch page, or global actions. Lock devices that must be excluded.
- 4** Apply a profile
Under Global actions > Profiles, choose the target and review the preview.
- 5** Review changes
Choose Modified only, then Before / after. Undo the last action if needed.
- 6** Save as
Save under a new name, review the final report, then test the import in Dante Controller.

Useful features

Recovery A temporary copy is created after each action. When reopening the same XML, choose whether to restore or discard it.	Merge a sub-project Add XML to project imports unique devices and only asks about names that conflict.
Quick profiles 48 or 96 kHz, 24 bit, 1 or 2 ms, automatic IP, with optional network mode. Targets and locks are respected.	Bilingual help The buttons automatically open the French or English guide according to the active language.

Remember: the application does not control a Dante network, cannot guarantee every XML format, and does not replace validation in official Audinate tools.
